

Python Test Paper – 1

Duration: 60 Minutes | Maximum Marks: 50

Section A – Multiple Choice Questions

1. Which of the following is an immutable data type in Python?
A. List B. Dictionary C. Tuple D. Set
2. `print(15 // 4)` outputs?
A. 3.75 B. 3 C. 4 D. Error
3. Which operator is used for comparison?
A. = B. == C. := D. +=
4. `x=10; if x>5: print('Hello')` Output?
A. Hello B. Nothing C. Error D. 10
5. Which loop is used when the number of iterations is known?
A. while B. for C. do-while D. repeat
6. Which keyword defines a function?
A. function B. define C. def D. fun
7. Which module generates random numbers?
A. random B. math C. os D. sys
8. Which mode appends to a file?
A. r B. w C. a D. x
9. Which keyword handles exceptions?
A. error B. catch C. except D. finally
10. OOP concept where one class acquires another's properties?
A. Encapsulation B. Abstraction C. Inheritance D. Polymorphism

Section B – Coding Questions

1. Print the data types of an integer, float, and string entered by the user.
2. Input two numbers and display +, -, *, /, and %.
3. Check whether a number is positive, negative, or zero.
4. Print the multiplication table of a given number up to 10.
5. Write a function `find_square()` that returns the square of a number.
6. Use the `math` module to print `sqrt(64)` and `pi`.
7. Create `student.txt`, write your name, then read and display it.
8. Handle division by zero using `try` and `except`.
9. Create a `Student` class with name and age, then display them.
10. Print even numbers from 1 to 20 using a loop.
